
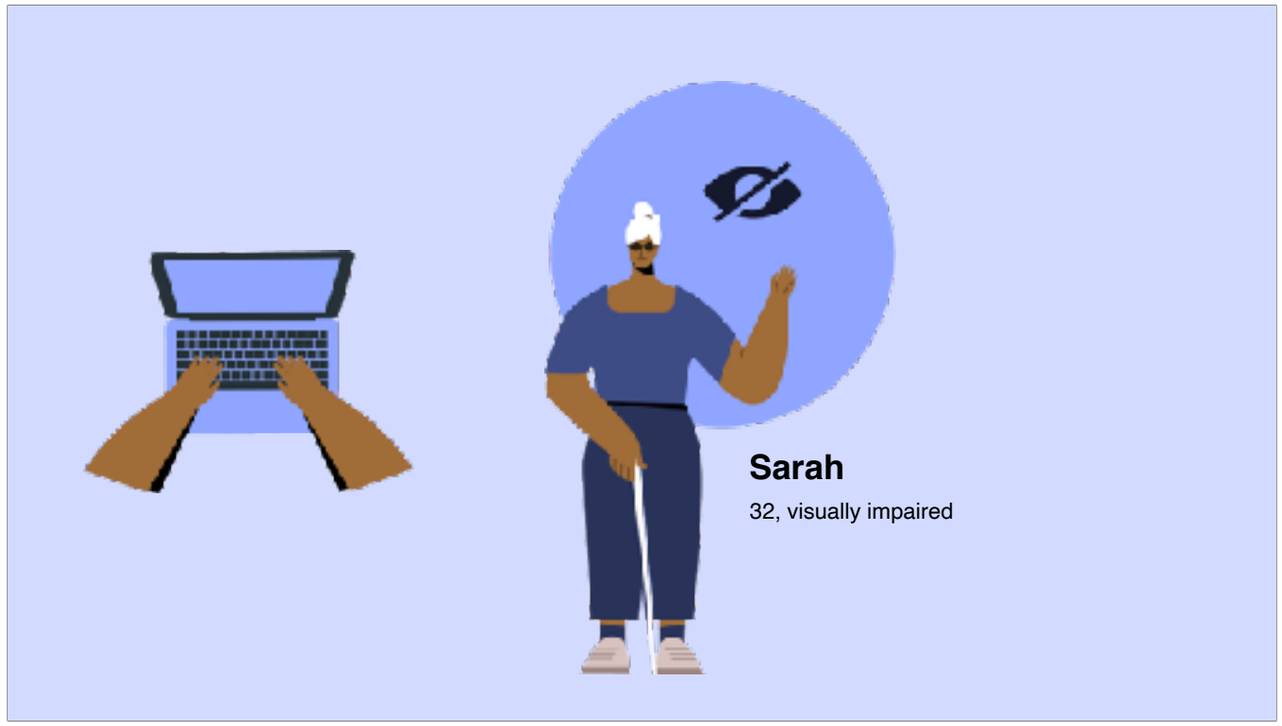
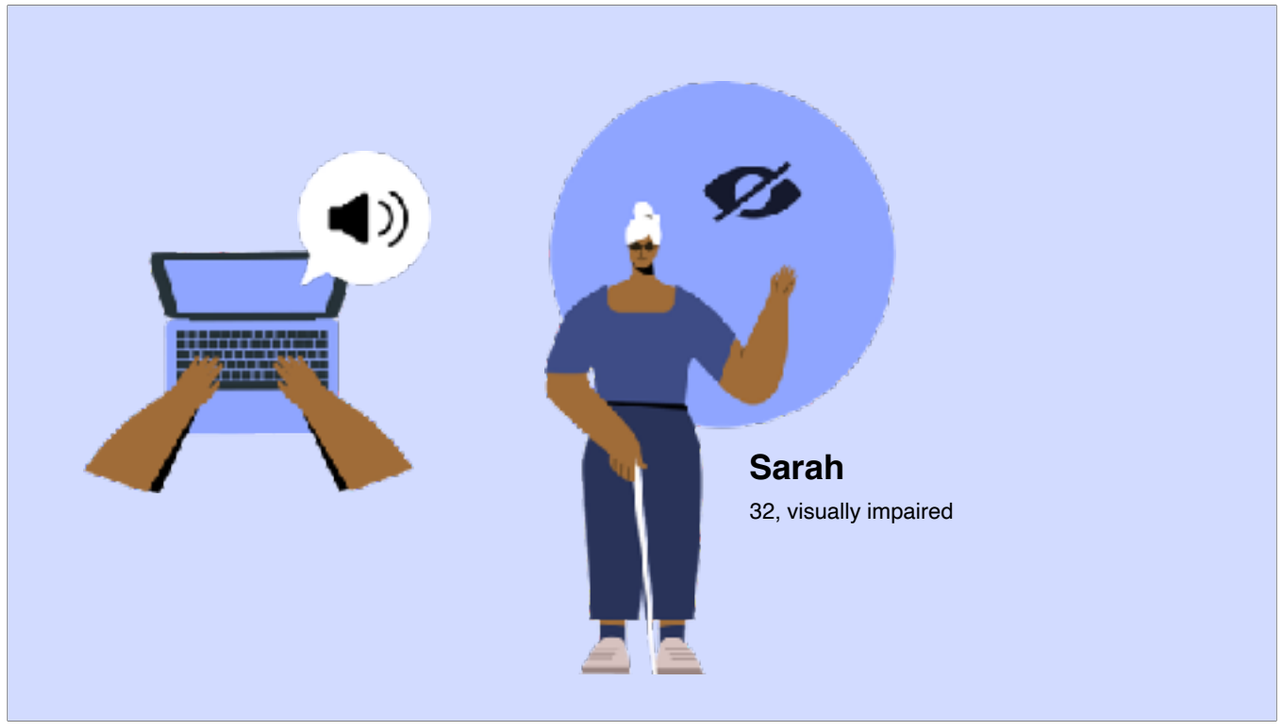
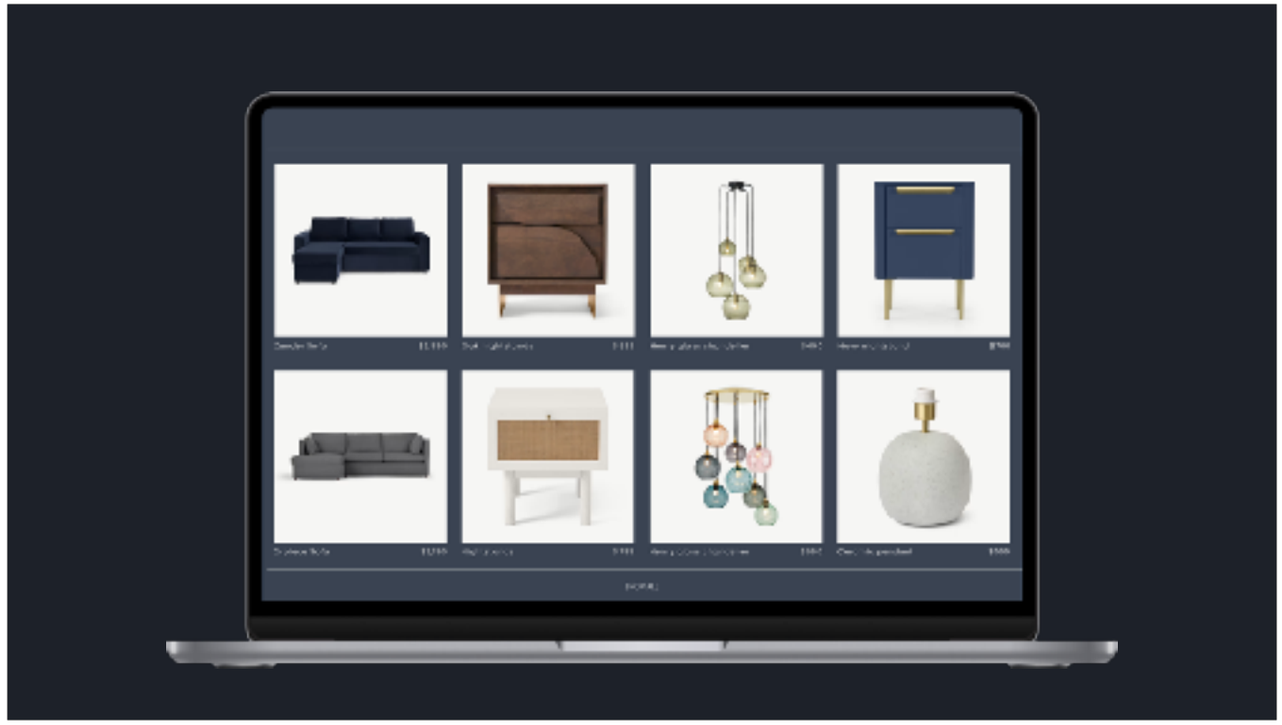
- Let’s meet Sarah, who has a visual impairment. She relies on



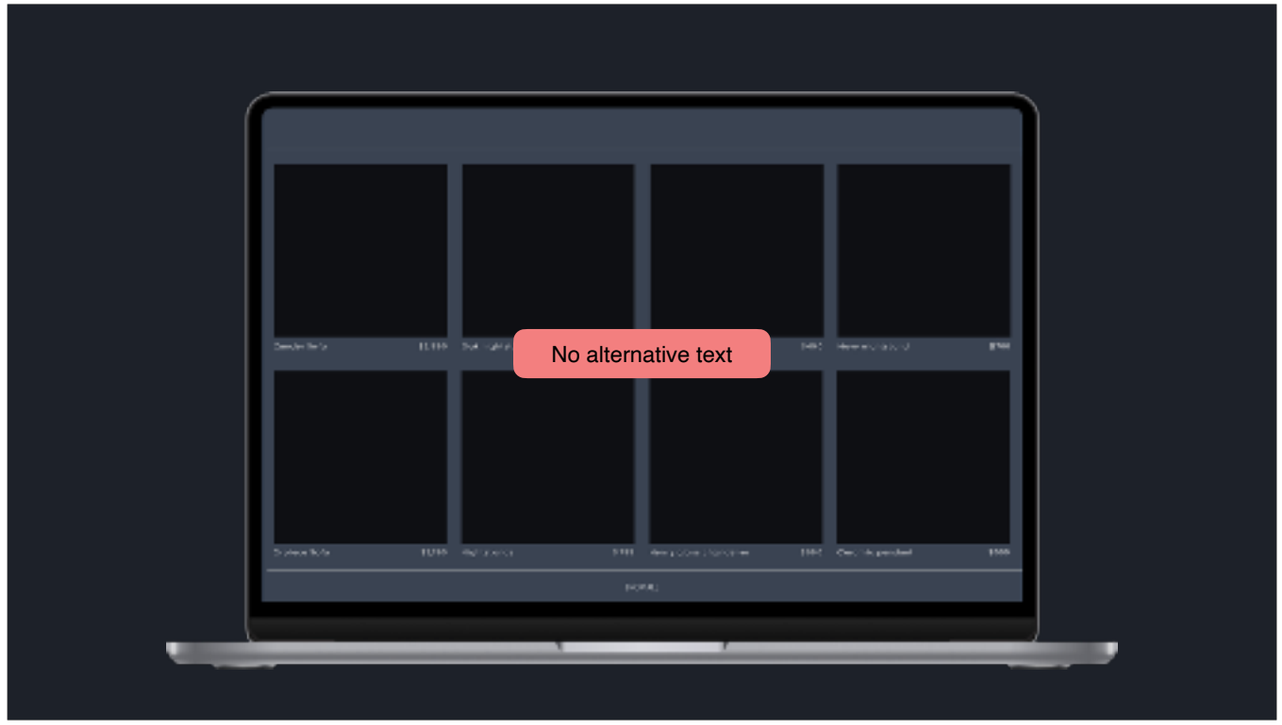
- a keyboard and



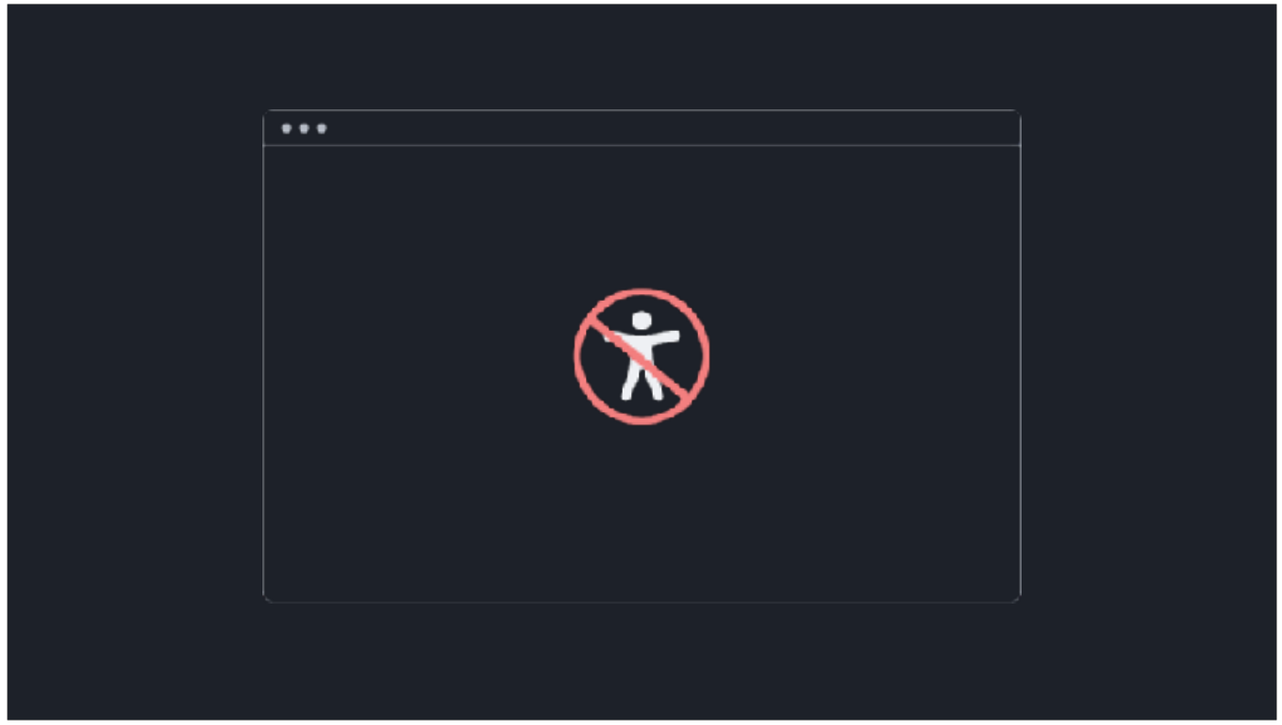
- a screen reader to interact with her computer. The screen reader converts text and images into speech, allowing her to navigate digital content.



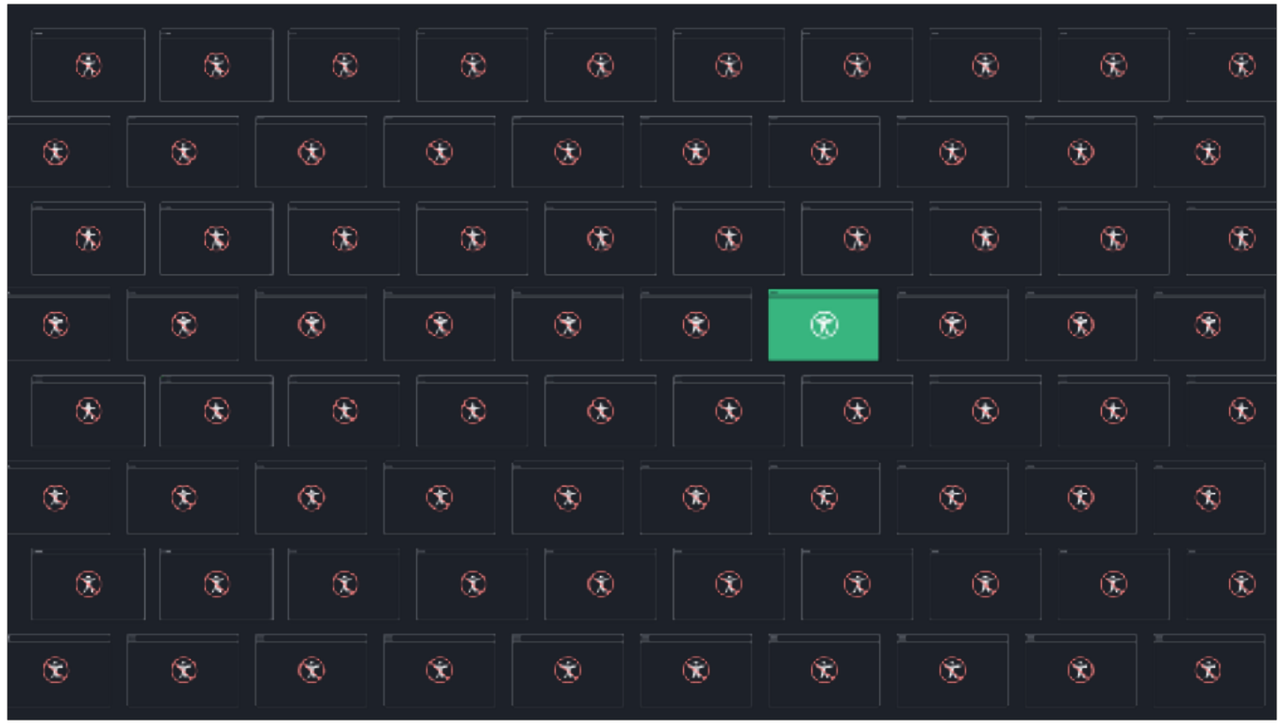
- Imagine Sarah shopping online to purchase furniture.



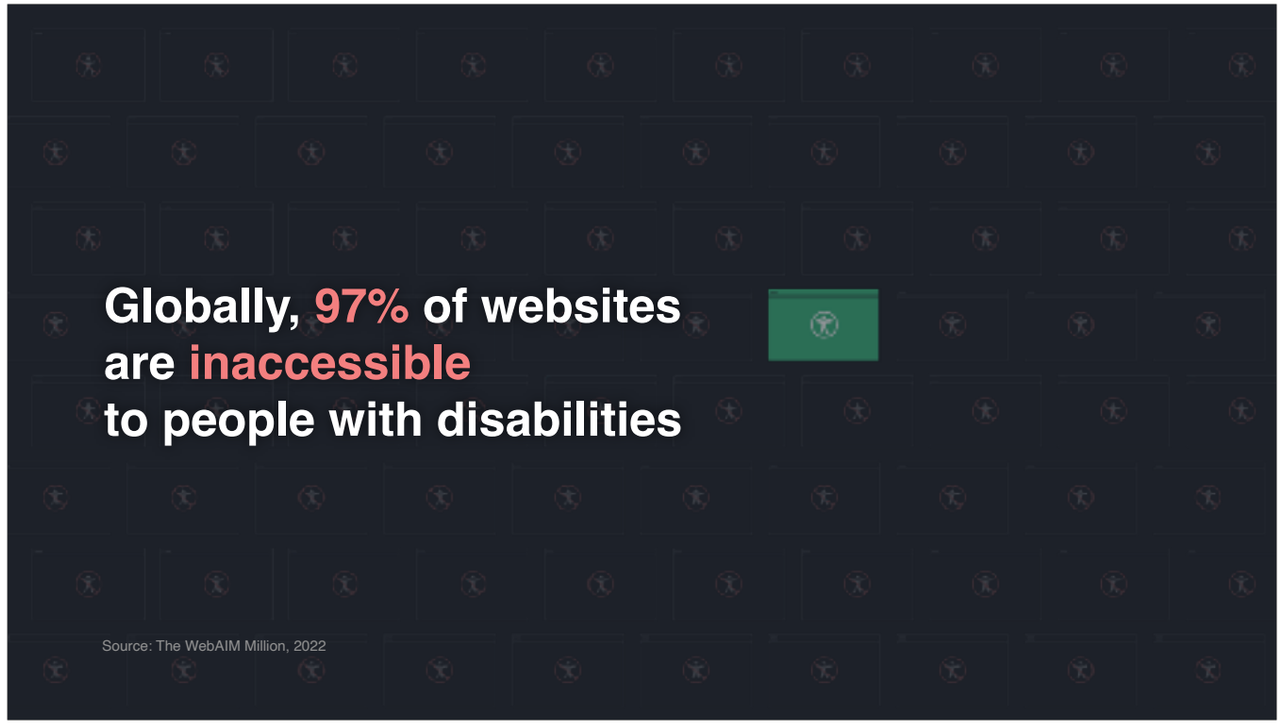
- But what if there is no alternative text, the text description of image? This will make it impossible for her to understand how they look actually.



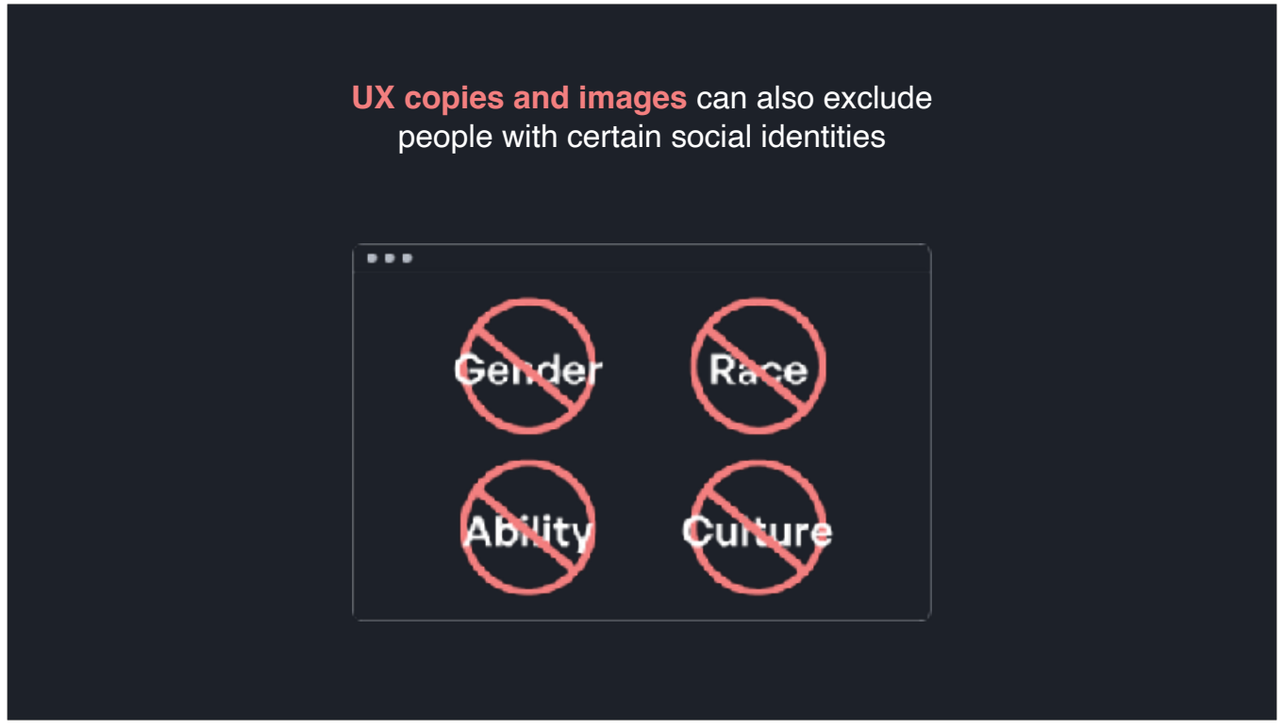
- This kind of experience, unfortunately, excludes her from the digital world.



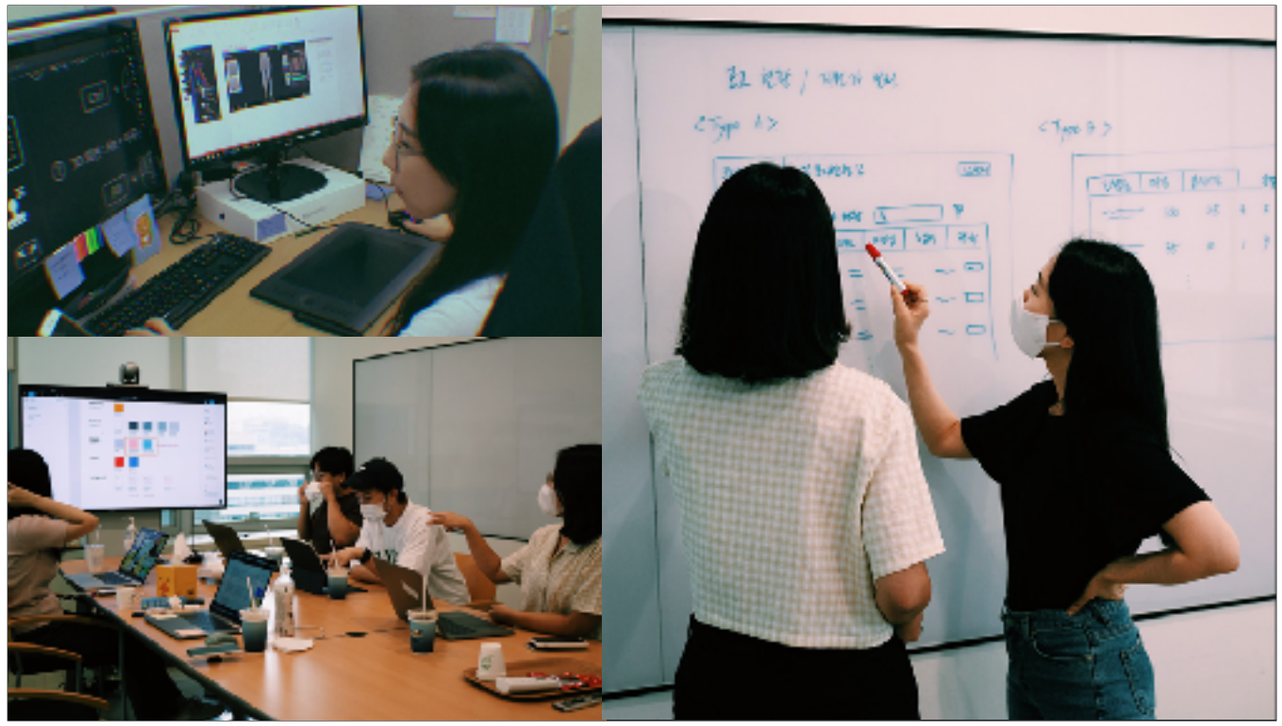
And it's not just about one website.



Globally, 97% of websites are inaccessible to people with disabilities who rely on assistive technology.



Inaccessibility is not the only issue. we still see a lot of copies, and images that are excluding people with certain age, gender, or ability from the digital world.

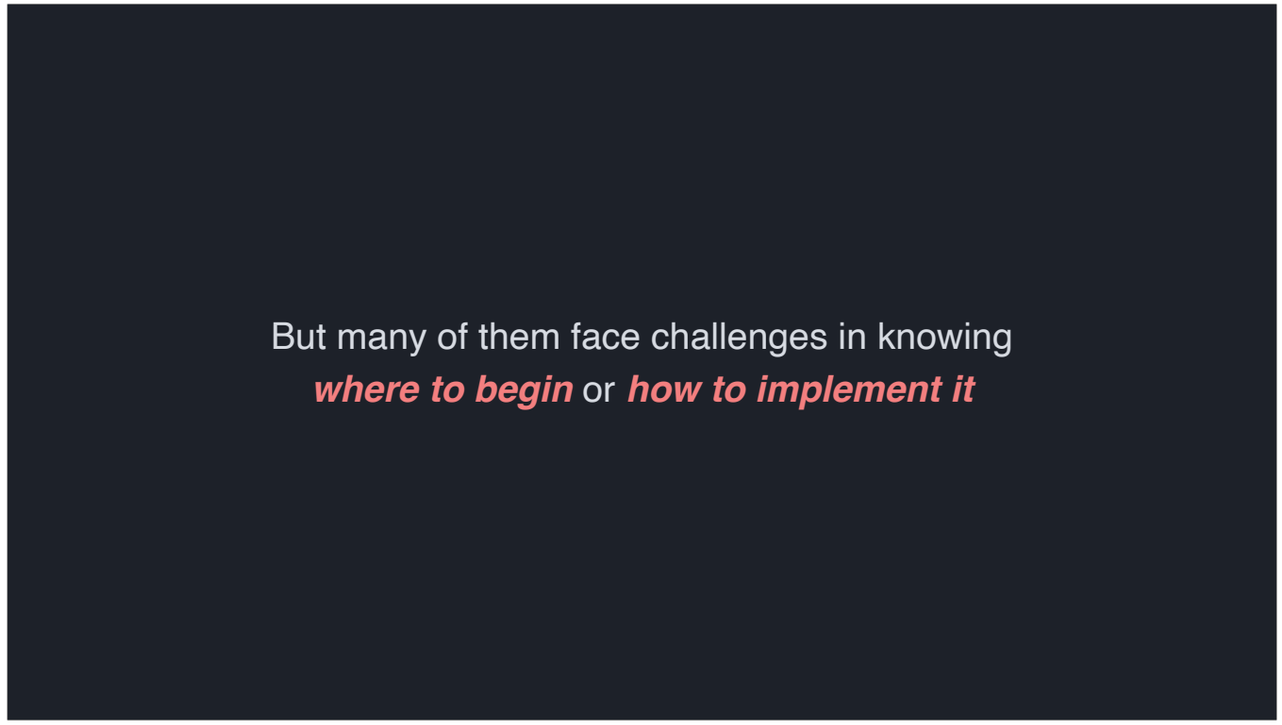


I must confess: during my six years as a product designer,

I struggled with inclusive and accessible design. This is why I decided to tackle this **problem**.

Most of product designers have ***good intentions***
regarding ***inclusive and accessible design***

And I was not alone. Many designers have **good intentions** for inclusive and accessible design,



but they face challenges in knowing where to begin or how to implement it.

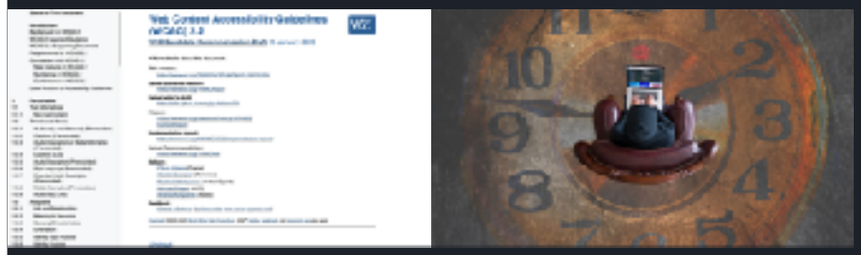
Challenges

Because creating accessible and inclusive design

Challenges

requires extensive knowledge

Challenges



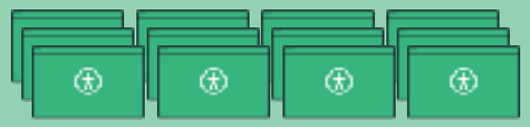
And can be time-consuming

Challenges

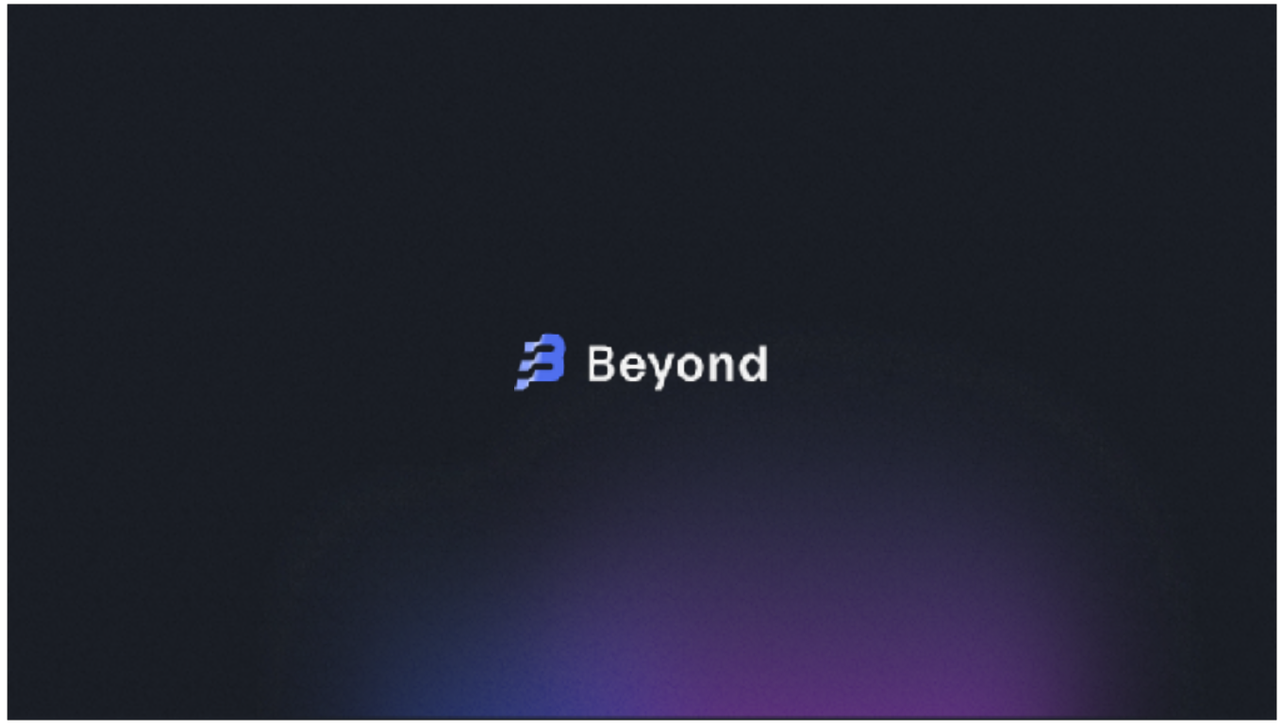
and demotivating.

Goal

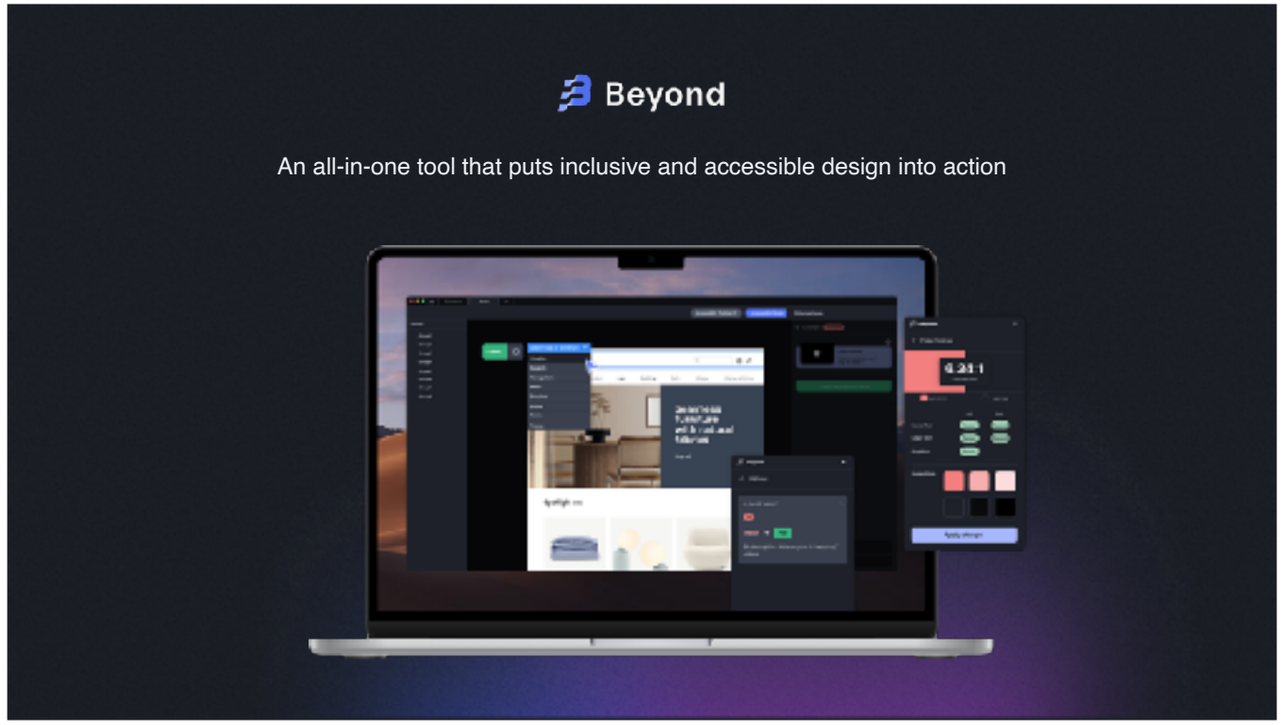
Motivate designers with practical steps to create inclusive and accessible design



so I came to this idea, that we need to motivate designers with practical steps and guides to solve this problem.



- Introducing, Beyond.



An all-in-one tool that puts inclusive and accessible design into action.

- Beyond (click) motivates designers to understand why we need inclusive and accessible design

Motivate

- Beyond (click) motivates designers to understand why we need inclusive and accessible design

Motivate

Assist

- Assists them to create such design

Motivate

Assist

Instruct

- Instructs them to add all the necessary elements and

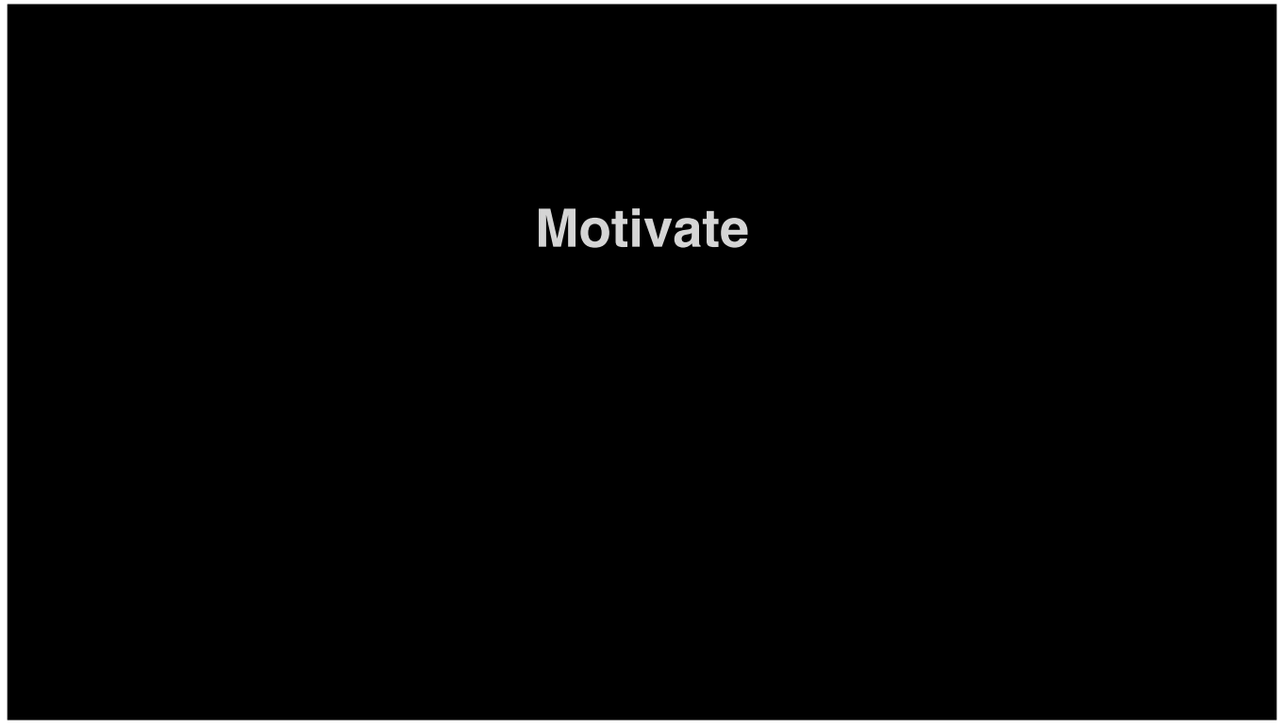
Motivate

Assist

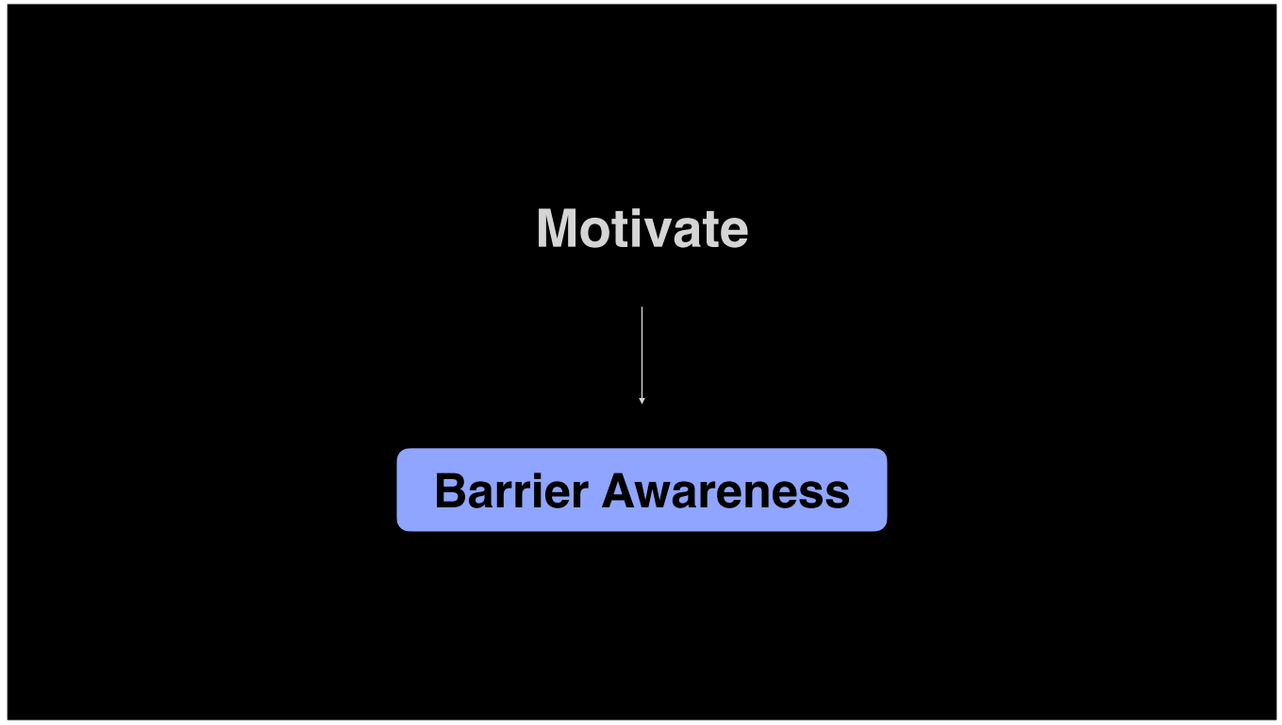
Instruct

Empower

- empowers them to validate their designs to truly be accessible. Let’s explore them one by one.

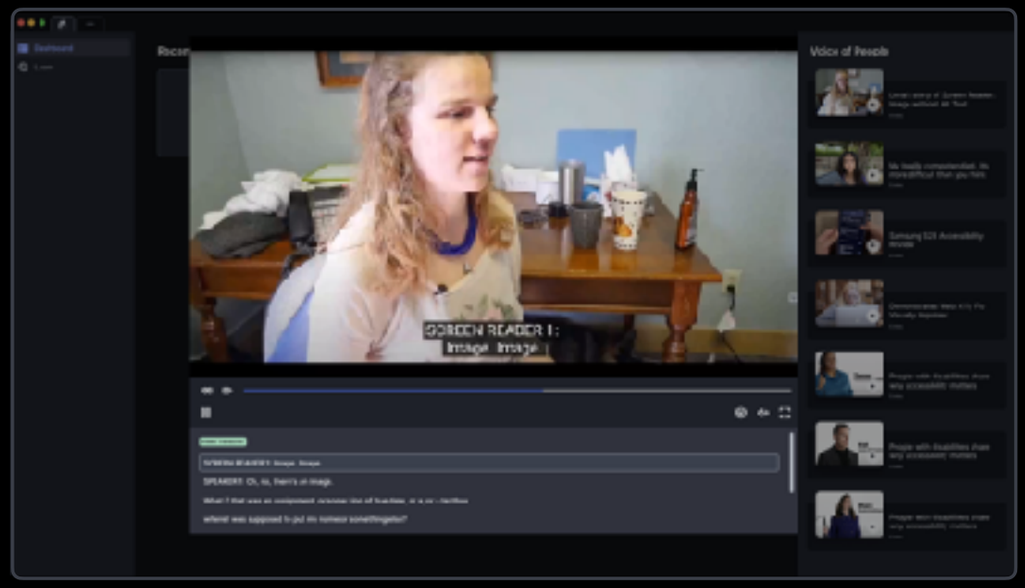


First, Beyond motivates designers (click) by sharing the barriers in accessibility and inclusivity



First, Beyond motivates designers (click) by sharing the barriers in accessibility and inclusivity

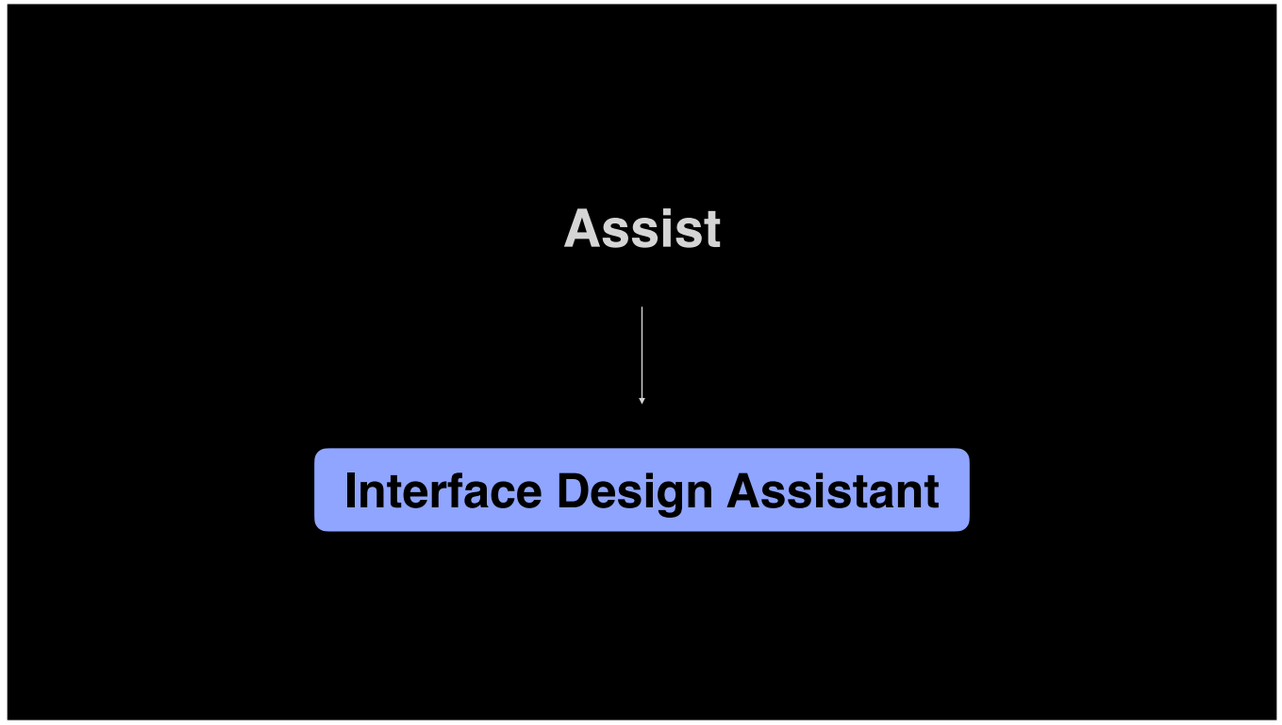
Voice of People



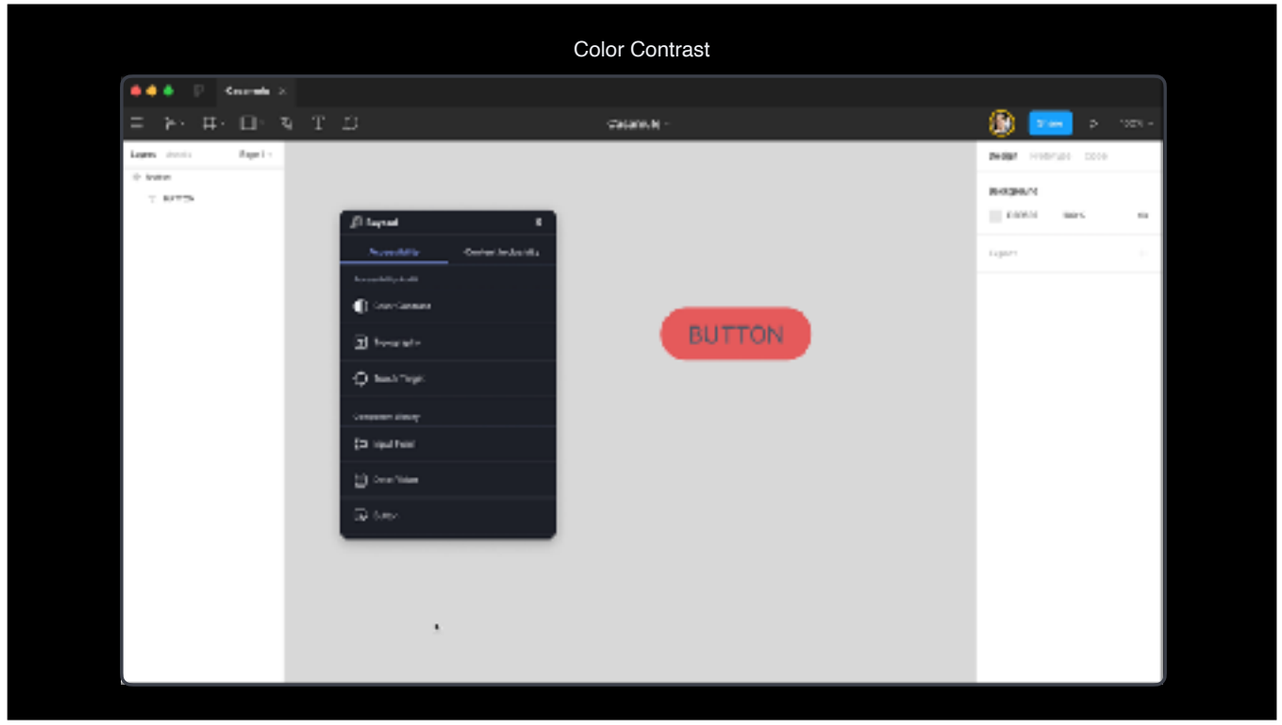
Source: Youtube video by ATRC CSU

through the voice of people with disabilities. In this video, she explains how difficult it can be when the website does not have proper alternative text for images.

Second, Beyond assists designers (click) to create UI elements accessible and inclusive by evaluating and suggesting suitable options.

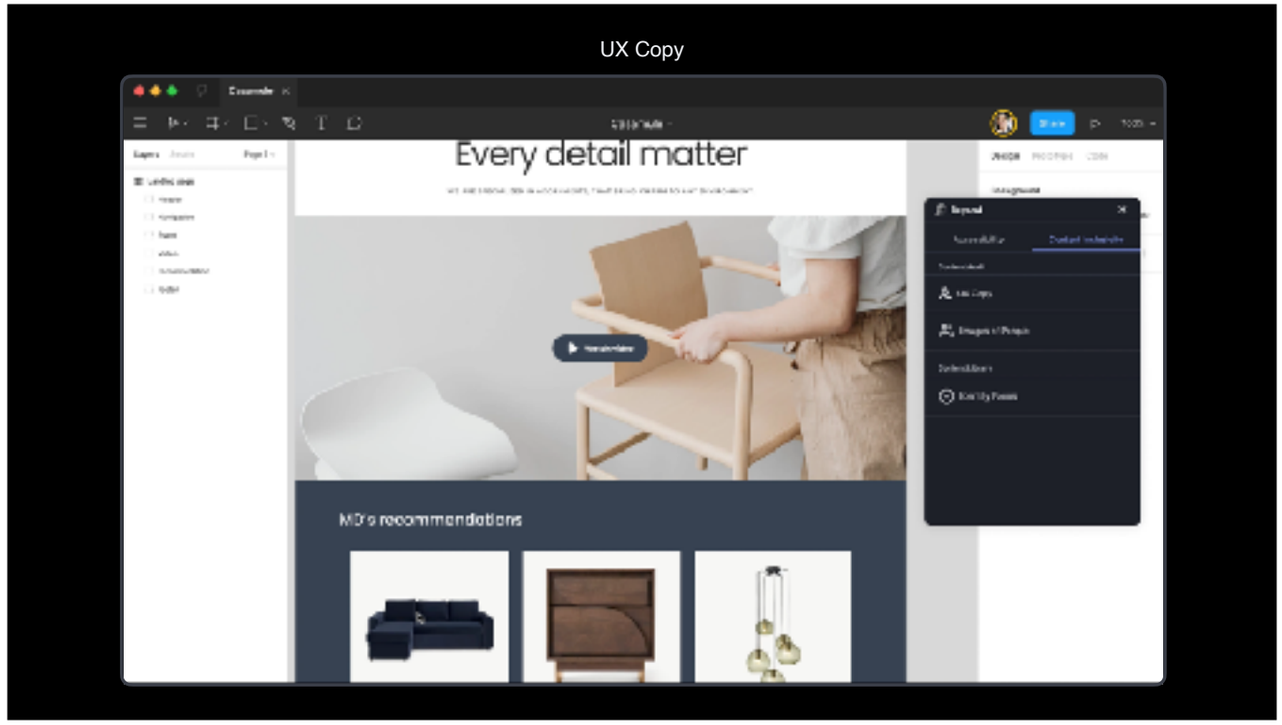


Second, Beyond assists designers (click) to create UI elements accessible and inclusive by evaluating and suggesting suitable options.

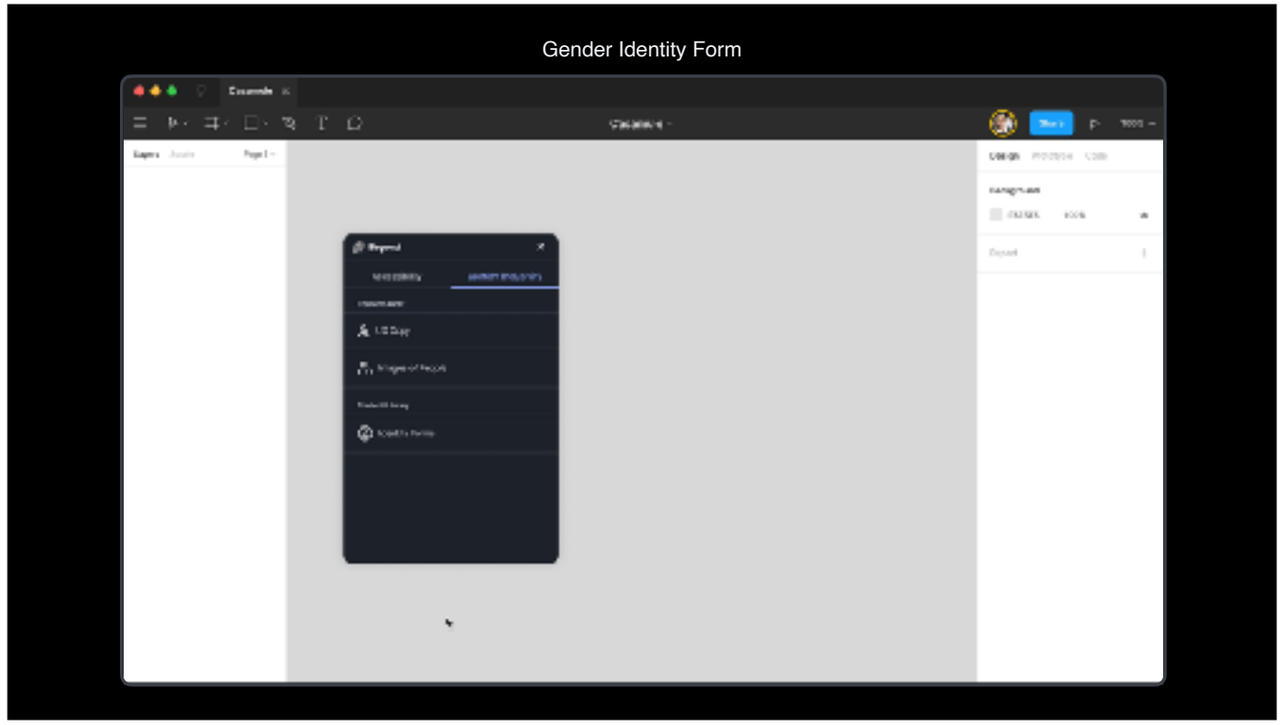


First, Beyond helps designers make visual elements such as buttons fully accessible.
- (play) You can easily check color contrast and adopt accessible alternatives that comply with the guideline, without any manual auditing.

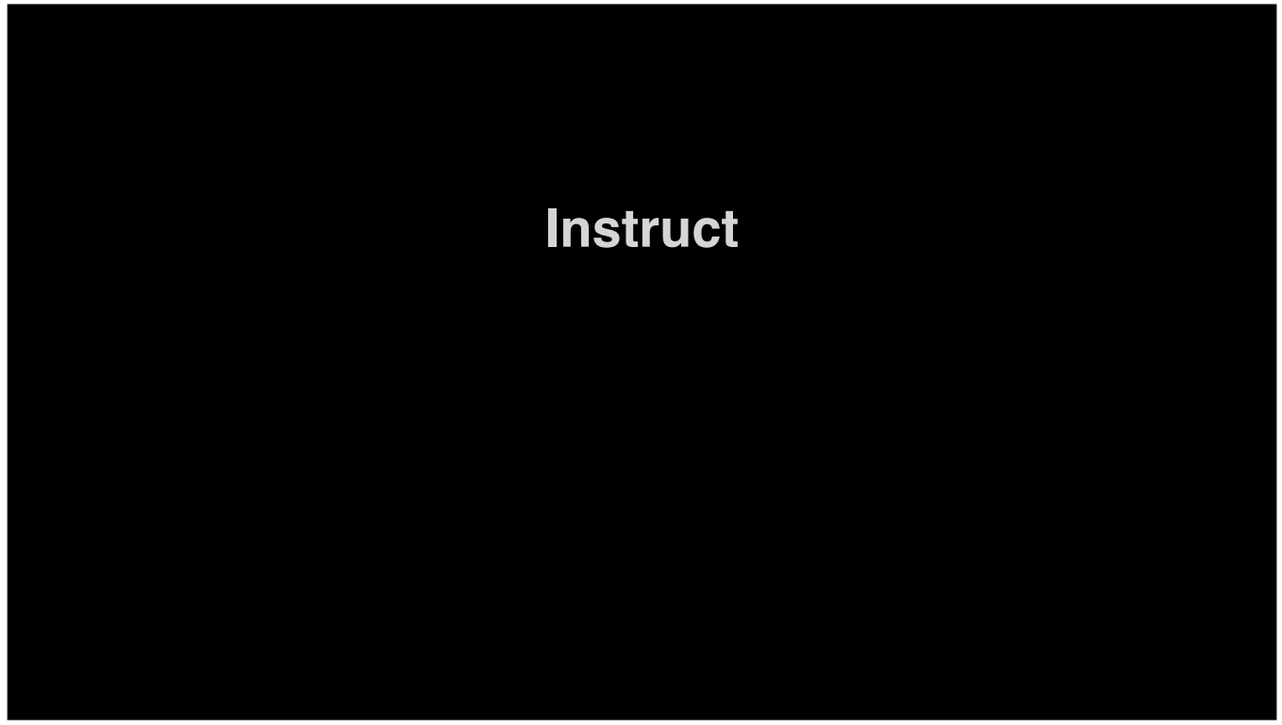
UX Copy



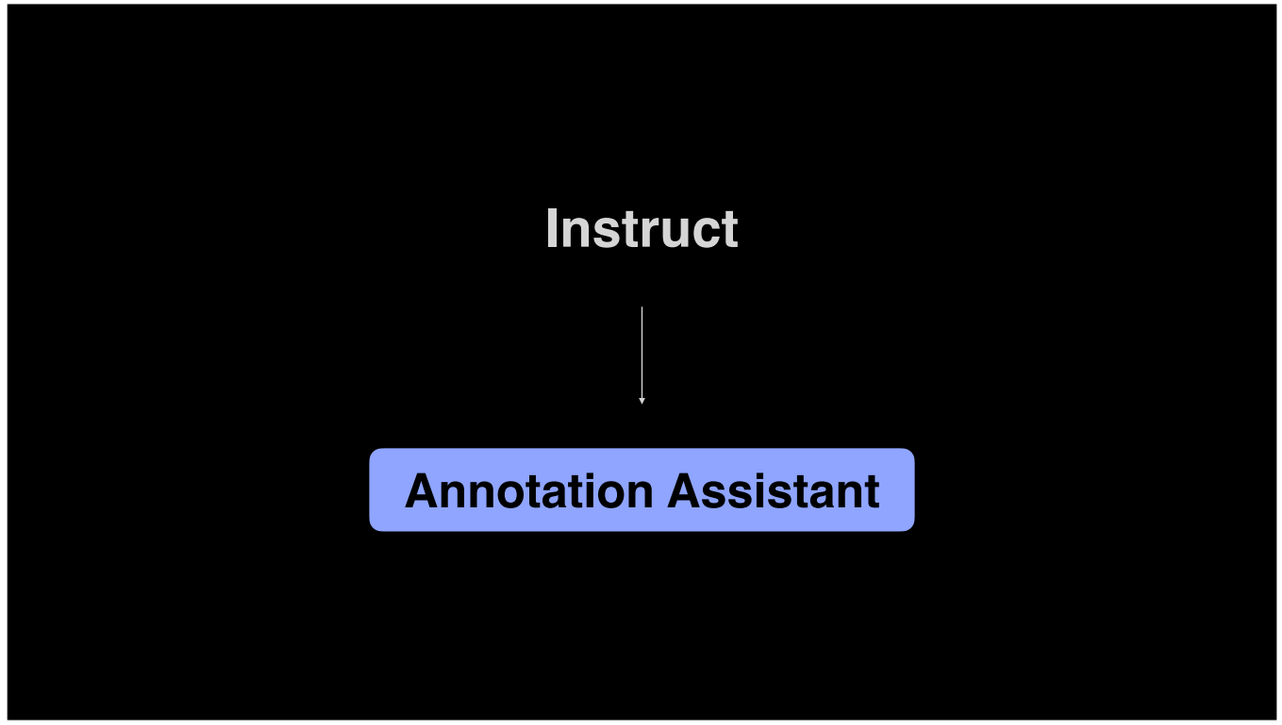
- And Beyond evaluates (play) content for inclusivity.
- Here, Beyond identifies "watch" as a problematic word, and suggests using "Play" as a more inclusive term. Because not everyone "watches" videos. Screen reader users listen to videos



- Also Beyond offers an inclusive content library.
- (play) Inclusive gender identity form is one example. This allows everyone to choose their gender identity in a welcoming manner. These audits and libraries save time for designers.



Third, Beyond instructs designers (click) to add all the necessary annotations for accessibility.



Third, Beyond instructs designers (click) to add all the necessary annotations for accessibility.

What are annotations?

Information added to design
for assistive technology users to use

Wait? What are Annotations? Annotations are information added to design for assistive technology users to use,

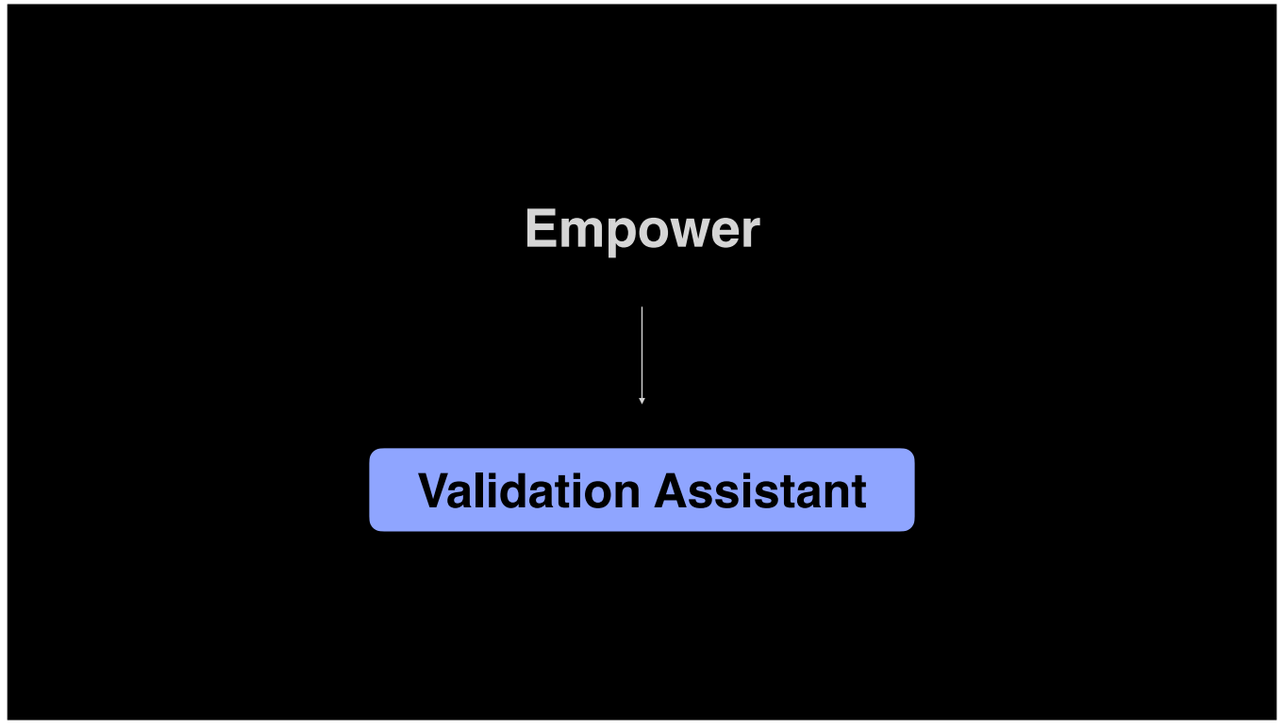
Lastly, Beyond empowers designers (click) to validate their designs to truly be accessible.



Lastly, Beyond empowers designers (click) to validate their designs to truly be accessible.

Beyond validates the annotations

1 *By simulating the annotated prototypes*

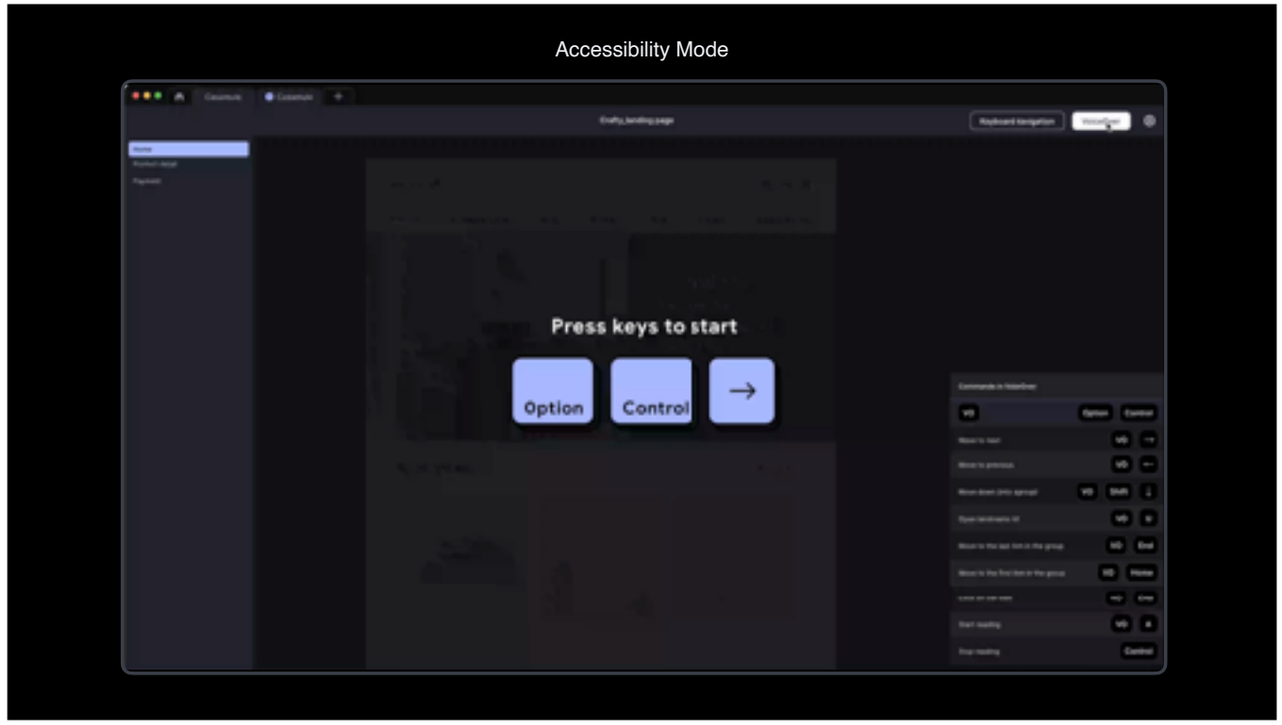
- 1. by simulating the annotated prototypes with keyboard and screen reader environment.

Beyond validates the annotations

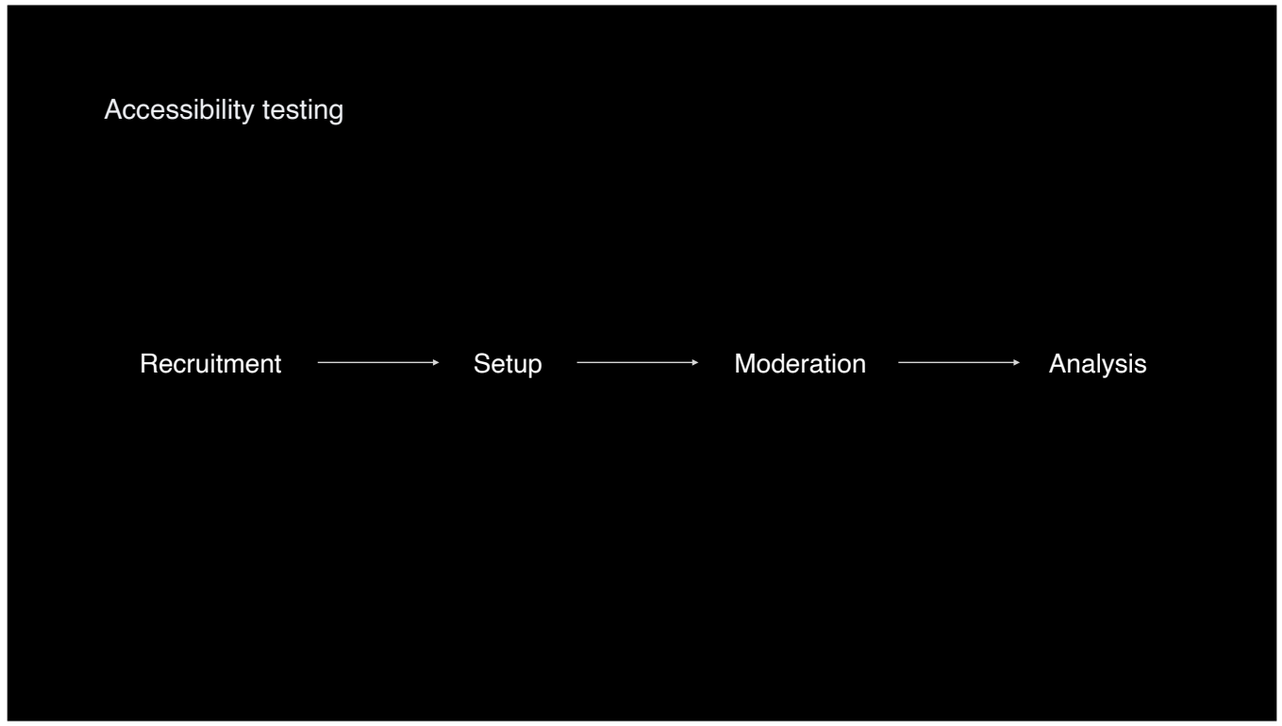
1 *By simulating the annotated prototypes*

2 *By providing accessibility testing with people with disabilities*

2. And by providing accessibility testing with people with disabilities



This simulation will allow designers to check how assistive technology users interact with their product. Let's check out a demo. You will hear how screen reader speaks aloud your design when navigating with a keyboard. (play video)
With this feature, we can empathize more with the assistive technology users.



- Conducting accessibility testing requires a lot of effort, (click) and it is not easy. (click) Beyond will work for you by providing one-stop service for testing. (click) by employing people with disabilities as in-house testers, Beyond simplifies the testing process (click) It offers designers a straightforward way to request unmoderated accessibility testing.
